## *Introduction To IMT Contract Product Development Group*

IMT's Core Engineering and Management Group has been creating Leading Edge, Technology Based products for over 20 years in the **Audio/Video/Data** for Entertainment and Security Markets

We have the expertise to blend High Level, High Reliability, Signature Technologies, while maintaining the exceptional Price/Performance balance necessary for Commercial Deployment

This is achieved using a series of IP Cores - technology previously developed, proven and deployed - that are assembled in conjunction with other System Elements to achieve overall Product Functionality

By using these IP Cores, packaged into Custom Integrated Circuits by our Sister Company, Lynx<sup>SMS</sup>, we are able to greatly reduce the Development Cycle and bring competitive products to market quickly, and with predictable Performance and Cost

In addition, by using Technology that's already been deployed and demonstrated as stable, our Client's Products are inherently reliable, needing little in the way of ongoing Technical Support

It's clear, based on our World Class Deployment Base, that our formula to develop High Performance, High Reliability (Mission Critical), yet Commercially Viable platforms is resoundingly successful

Following is a selection of typical Deployments

- **The Pentagon** A truly Redundant, Self Healing, Emergency Paging System following 9/11
- **Dept Of Energy** Pantex & Rocky Flats Nuclear Weapons Facilities - Emergency Paging System
- **US Navy** Naval Air & Surface Warfare Centers, including SONAR Signal Processing
- **US Space Command** CCTV and Data Intercom System for Perimeter and Operations Security
- **Theme Parks** All major Theme Parks, including Walt Disney – Audio/Video Entertainment
- **Sports Stadia** From 2006 World Cup Soccer in Germany, to the Louisiana Superdome
- **Airports** Worldwide – SF, LAX, Baltimore/Washington, Lima, Athens, Dresden, Salzburg
- **Theaters** Including Prince Edward in London and Petronas Towers in Kuala Lumpur
- **School Campus** Worldwide, including University College, London - CCTV Systems
- **City Center** Angers, France – an integrated CCTV, Paging, CashPoint/Ticketing and Barrier Control System - linking multiple Parking Lots around the City Center to a Main Control Room over a Distributed Fiber Optic Network

**IMT has assembled a High Level Team of Engineering and Operations Experts who bring Education, Experience and Extensive Industry Knowledge to the process of creating Innovative New Products**
